

TAPPAL FAIZAN

Java Backend Developer | Microservices | AI-Augmented Engineering

☎ +91 9515668687 | ✉ shafaizan393@gmail.com | 🔗 linkedin.com/in/tappal-faizan-vali-04b745217 | 📍 Yeswantapur, Karnataka

Summary

Results-driven Java Backend Developer with 3.3+ years of experience designing and delivering high-performance, event-driven microservices in the banking domain. Proficient in Spring Boot, Kafka Streams, and IBM MQ, with hands-on experience integrating enterprise authentication, cloud-scale data querying, and AI-powered tooling. Passionate about leveraging modern AI tools and Retrieval-Augmented Generation (RAG) techniques to accelerate development and build smarter backend systems. Proven track record of performance excellence in Agile teams.

Skills

Languages & Frameworks: Java, Java EE, Spring Boot, Spring Framework, Swift

Messaging & Streaming: Kafka, Kafka Streams, IBM MQ, IBM WebSphere

Architecture & Practices: Microservices, Event-Driven Architecture, RESTful APIs, JWT, SDLC, Agile/Scrum

Cloud & Data: Google BigQuery, Microsoft SSO, OAuth 2.0

AI & Emerging Tech: Retrieval-Augmented Generation (RAG), LLM Integration, AI-assisted Development, Prompt Engineering

Frontend & Tools: React, Git, Postman, IntelliJ IDEA

Experience

Senior Software Engineer – L2 – Wipro Limited

07/2023 – Present

Bengaluru

A leading global information technology services company — Banking Domain

- Contributed to transforming a monolithic legacy banking system into scalable, event-driven microservices using **Spring Boot**, **Kafka**, **Kafka Streams**, and **IBM MQ**, improving system resilience and reducing deployment coupling.
- Developed the **Fund Check module**, implementing dynamic customer charging logic based on payment type to ensure accurate, compliant, and auditable transaction processing.
- Integrated **Microsoft Single Sign-On (SSO)** with access token validation into the authentication layer, enforcing secure and seamless user authorisation across services.
- Built advanced search functionality leveraging **Google BigQuery**, enabling efficient querying of large-scale financial datasets to support business intelligence operations.
- Designed loosely coupled, fault-tolerant microservices following **SOLID** principles, achieving high availability and performance optimisation across backend workflows.
- Utilised **AI-assisted development tools** and **RAG-based workflows** to speed up code reviews, documentation, and knowledge retrieval within the engineering team.
- Collaborated with cross-functional teams to standardise best practices and ensure timely, high-quality delivery of features through Agile ceremonies.

Projects

Payments Dashboard Microservice

Wipro — Release 0

Architected and developed a payments dashboard microservice enabling users to view all transactions with rich metadata. Empowered Customer Journey managers to analyse end-to-end transaction flows, significantly improving operational visibility and reducing manual investigation time for payment exceptions.

API Marketplace05/2023 – 07/2023

Developed a developer-facing platform for uploading, sharing, and discovering APIs across use cases. Responsible for backend feature development, designing RESTful API contracts, implementing secure endpoints, and ensuring robust, scalable backend functionality.

Education

Bachelor of Technology (B.Tech.) – Electronics and Communication Engineering – MITs, Madanapalle01/2018 – 05/2022

Madanapalle, Andhra Pradesh

Key Achievements

- **Best Performer Award, November 2025** – Recognised at Wipro Limited for outstanding contribution, ownership, and excellence in backend development and end-to-end project delivery within the banking feature team.

Strengths

- **Backend Development** – Strong command of Java and microservices architecture; consistently delivers clean, maintainable, and production-grade code across distributed systems.
- **AI Proficiency & RAG** – Actively applies AI tools (LLM-based assistants, Copilot-style tooling) to accelerate development workflows. Knowledgeable in **Retrieval-Augmented Generation (RAG)** pipelines — including vector stores, embedding models, and context-aware retrieval — enabling smarter, knowledge-grounded backend integrations.
- **Problem Solving & Ownership** – Demonstrates strong analytical thinking and end-to-end ownership of features, from design through deployment and production monitoring.
